BugVoice: Read Me First

1. Install

Drag BugVoice into Applications.

2. Open BugVoice

BugVoice is not signed with an Apple Developer ID, so macOS blocks the first open. You will see this message:

You only do this once. Use one of these two ways.

Way A: System Settings (easiest)

1. Click **Done** on the message. Do not click Move to Trash.
2. Open System Settings › Privacy & Security.
3. Scroll down and click **Open Anyway** next to BugVoice.
4. Enter your Mac password.

Way B: Terminal

1. Open Terminal.
2. Paste this and press Return:

   ```
   xattr -cr /Applications/BugVoice.app
   ```

3. Open BugVoice again.

Updates through Check for Updates need the same step. The update note in Settings › General repeats both ways.
